Instructions

Congratulations on the purchase of your new Aqua Blade surface cleaner.

The Aqua Blade System dries any smooth surface without leaving streaks. Even on curved glass, café blinds, car glass and acrylic glass.

The unique integrated water tank can hold collected water on downward strokes without leaving behind any messy drips.

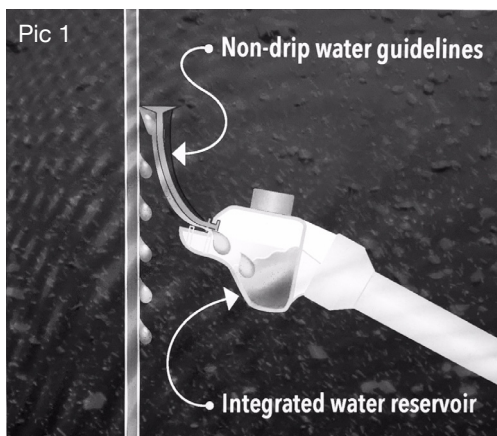

Cleaning instructions:

1. Washing

- Always wash the surface with a little water and lots of detergent to create dense foam surface (soak surface, if really dirty)
- **It is best** to apply detergent straight to the fiber of the pre washer. Creating dense foam by washing the surface in random motion.
- More movement and detergent will increase the amount of foam, **resulting in less drips**.

2. Drying

- Ensure the surface is wet to avoid smears.
- to achieve a good clean start, try to get the water behind the squeegee. This sometimes requires a double start or a wipe with a cloth over the top of the squeegee.
- work downwards on a vertical stroke, use a little pressure so the blade is a little bent (**pic 1 below**).
- After each stroke wipe the top the blade with a tea towel (only necessary to avoid start marks), the alternative is to double start to avoid start marks (2-3 times or until water is behind the blade).
- Work overlapping each stroke, about 5 cm (2 inch).
- Empty the tank regularly (hole on left hand side of the unit).
- To allow the collected water to stay in the housing, hold the unit accordingly.

PRODUCT DESCRIPTION

1 x Aqua Blade - large 30 cm

1 x Aqua Blade - large set
Set incl. Pre washer, short and telescopic handle

1 x Aqua Blade - small 22 cm

1 x Aqua Blade - small set
Set incl. Pre washer, short and telescopic handle

1 x Pre washer

1 x Short handle

1 x Telescopic handle 0.85 m – 1.50 m
