

Guttering that *REALLY* works!

Say Goodbye to Guttering Problems

Are you tired of dealing with clogged or overflowing gutters every time it rains? Conventional gutters don't have enough fall for water to flow efficiently. With only 1mm of fall per metre, they are prone to overflowing in heavy rain, causing damage to fascias, water ingress into the home, attracting termites and causing rising damp issues.

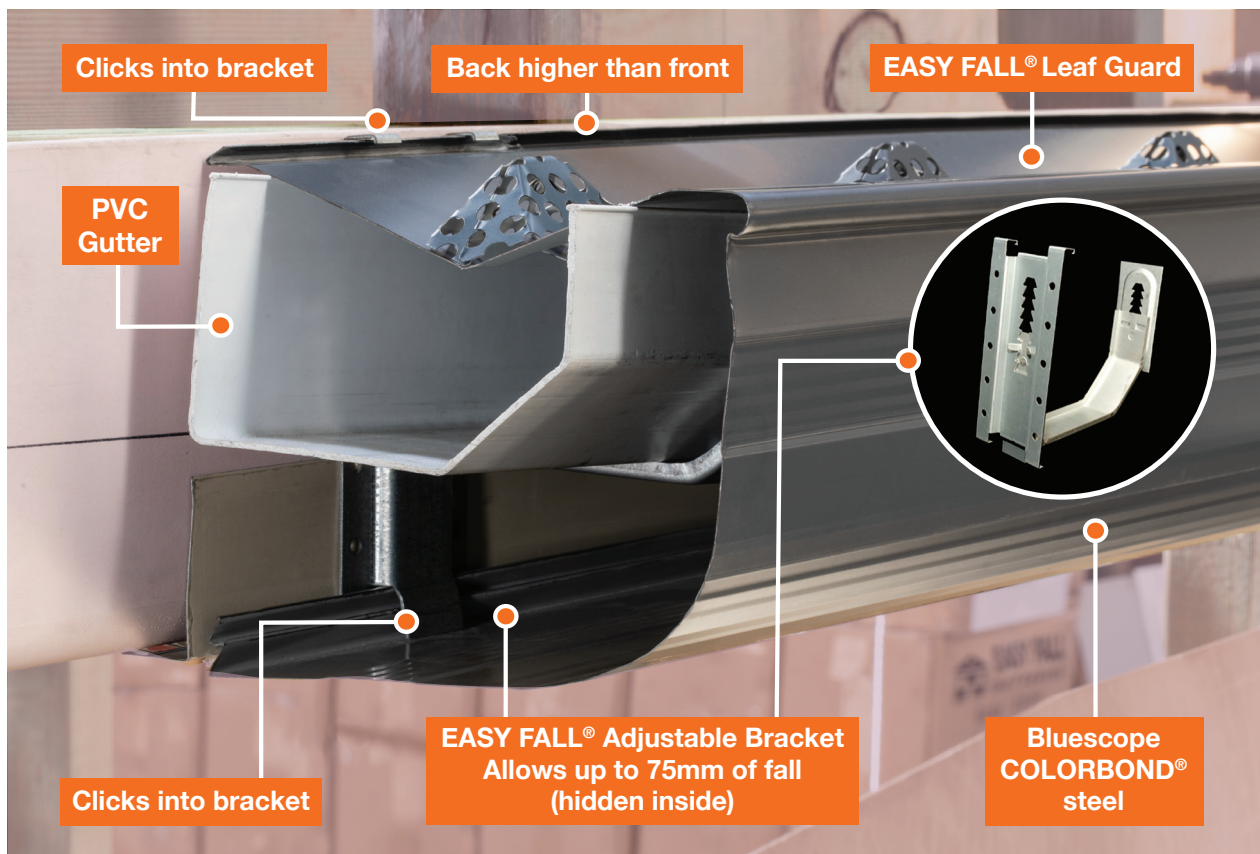

Introducing our innovative solution: the EASY FALL® Guttering System. This amazing system, designed in Australia, outperforms all other guttering, by providing up to 7 times more fall; ensuring water is swiftly directed away from your home to the downpipes, in the heaviest of rain.

Our Products

EASY FALL® Roll Formed Guttering System

Innovative Design: The EASY FALL® Roll Formed Guttering system features a unique design; with the back higher than the front to prevent overflow into eaves and/or fascias during heavy rain.

Patented Adjustable Bracket: The EASY FALL® Adjustable Bracket ensures that up to 75mm of fall is attained within the system, whilst retaining a level appearance to the exterior of the home.

Lifetime Durability: For long-lasting durability, the internal PVC gutter is enclosed in an outer Bluescope COLORBOND® steel shell, which shields it from sun damage. We also provide a 25 Year Warranty against rust.

EASY FALL® Leaf & Ember Guard

Prevents Blocked Gutters: The raised EASY FALL® Leaf Filters are designed to prevent larger debris from blocking the gutter, and facilitate continuous water flow during rainfall events.

Reduces Maintenance: The removable EASY FALL® Leaf Filters with 'click-off' clips, provide easy access for a hose to clean conventional gutters. Best used as a component of the EASY FALL® Guttering System for an even lower maintenance, self-cleaning solution.

Resists Burning Embers: The shallow dish design allows excessive debris to be easily hosed off, or dry out and be blown away. This greatly reduces the fuel load. The solid metal Leaf Guard increases bushfire protection, and with the back higher than the front; minimises the potential for dry leaf litter entering the roof cavity.

EASY FALL® Leaf & Ember Guard can be retrofitted to all types of conventional guttering.

Made from COLORBOND® steel

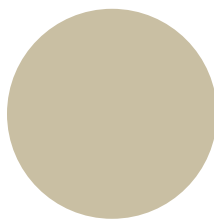

With five layers of protection, COLORBOND® steel has been designed to endure our harsh Australian environment and provide long-lasting durability you can trust.
