**Using Architecture &  
Passivhaus, we democratise  
access to Healthy, Sustainable,  
Comfortable & Robust buildings,**

**designed & constructed  
with modular Structural  
Insulated Panels,**

**that enables all our  
occupants to spend their lives  
in healthy buildings.**

*Why choose Evisa?*

## Healthy Living

We believe the buildings that we live our daily lives in can have a profound effect on our long term physical, mental health and well-being.

At Evisa, we create buildings that are designed to minimise the risk of adverse health effects, increasing the harmonious liveability of a space.

## Truly Sustainable

Sustainability proliferates all that we do.

We are highly focused on minimising the carbon footprint of the buildings that we produce.

From the energy efficient design of our buildings to the decarbonised materials that we utilise, reducing the impact we have on our environment is at the forefront of our work.

## Durability & Longevity

Crafted to endure the test of time and tailored to accommodate the dynamic changes of life, our buildings exemplify enduring design.

Solid, resilient, and meticulously planned, our residential designs and material selections provide assurance through their lasting quality.

## Flexibility in Design

Redefining the healthy, sustainable, durable architectural design, we believe that buildings need to be adaptable to the objectives people have for their lives, now and into the future.

Our buildings are designed to evolve to our client's needs and adapt to the dynamic future changes.

## Accelerated Construction

Manufactured off-site in a controlled environment, SIPs are precisely cut and assembled, reducing on-site construction time and on-site cutting and waste.

Once the panels arrive at the construction site, labelled and numbered, they are ready for installation.

The streamlined installation process can diminish the need for specialized labor, requiring less training time compared to traditional framing methods.

*How we can help?*

## **SIPs Manufacturing & Installation**

Structural Insulated Panel systems (SIPs) are the healthy, energy efficient and robust alternative to traditional timber framed building construction.

At Evisso, we designed our proprietary SIPs to meet exacting Australian construction standards.

They are airtight, structurally sound, accurate, with the ability to create thermally bridge free enclosures on construction.

We partner with developers, architects and builders to deliver cost-effective, easy-to-install SIPs solutions for innovative projects.

## **Adaptable Dwellings**

We believe that healthy, sustainable, durable, resilient and adaptable homes should be able to be accessed by everyone.

As architects and project managers, we've simplified the process of designing and constructing a SIPs home, through our range of standardised SIPs Adaptable Dwellings.

From striking five-bedroom family homes to high density residential dwellings, our SIPs Adaptable Dwellings range in size, scale and format.

## **Architectural Services**

The foundation of our expertise, we are architects, building designers, building physics experts and project managers by trade.

Blending building science with material technology, our ambition is for future generations to enjoy healthy buildings that last. We're challenging the built environment status quo by infusing innovative and multi-disciplinary thinking into our builds.

We craft healthy living spaces that honour our environment. Working closely with owners and developers, architects, designers and builders, we collaborate to ensure our outcomes benefit both people and our planet.

## **Passivhaus & ESD**

Airtight, well-insulated buildings that achieve the highest levels of comfort and indoor air quality. This is Passivhaus.

As Certified Passive House Designers, we offer consultancy services on Passivhaus building design, advising on all stages of project development, including planning, product selection and certification.

With Evisso by your side, you'll have the tailored, trusted support required to execute truly energy-efficient homes, designed for well living.

## **Project Management for Owner-Builders**

Our project management services for owner-builders provide the tools, structure, and expert guidance you need to navigate the complexities of construction with confidence.

We simplify the process by coordinating timelines, trades, and compliance requirements, maintain integrity and transparency across both costs and works delivered, so you can move forward with clarity and trust at every stage.

Our approach empowers you to take an active role in your project, while still benefiting from the assurance of professional oversight, energy-efficient outcomes, and homes that reflect Evisso's high standards.
