

Healthy, beautiful,  
and sustainable homes.

Ready for life.

**evissa**

We should all lift our expectations of what a home can deliver its occupants. Homes that don't simply adhere to 'code', or even best practice technical standards, but also offer comfort, security, and a deep sense of pride.

These are the homes that Evisso creates in partnership with clients. Beautiful, healthy and efficient. Adaptable and resilient for all that the future may hold.

Delivering world-class Passivhaus standards in Australian conditions and employing their own innovative Structural Insulated Panel (SIPs) design system, Evisso delivers an accessible new standard for how we can.

A standard that we should all aspire to.

## Why choose evisso?

### Healthy

We create buildings that are designed to minimise the risk of adverse health effects, and increase the harmonious liveability of space.

### Flexible

Our buildings evolve to our client's needs and adapt to the changes of a dynamic future.

### Sustainable

From energy efficient design, to the decarbonised materials that we utilise, reducing the impact on the environment is at the forefront of our all our work.

### Fast

Manufactured off-site in a controlled environment, SIPs are precisely cut and assembled, reducing on-site construction time and waste.

### Resilient

Solid, durable, and meticulously planned, our design and material selections provide assurance through their lasting quality.

view  
case study

We're challenging the built environment status quo by infusing innovative and multi-disciplinary thinking into our builds.

The foundation of our expertise, we are architects, building designers, building physics experts and project managers by trade.

Blending building science with material technology, our ambition is for future generations to enjoy healthy buildings that last.

We partner with developers, architects and builders to deliver cost-effective, easy-to-install SIPs solutions

## How can we help?

### SIPs manufacturing & installation

Structural Insulated Panel systems (SIPs) are the healthy, energy efficient and robust alternative to traditional timber framed building construction.

They are airtight, structurally sound, accurate, with the ability to create thermally bridge free enclosures on construction.

### Adaptable dwellings

From striking five-bedroom family homes to high density residential dwellings, our SIPs Adaptable Dwellings range in size, scale and format.

### Architecture

We craft healthy living spaces that honour our environment. Working closely with owners and developers, architects, designers and builders, we collaborate to ensure our outcomes benefit both people and our planet.

### Passivhaus & ESD

As Certified Passive House Designers, we offer consultancy services on Passivhaus building design, advising on all stages of project development, including planning, product selection and certification.

### Project Management

Our project management services for owner-builders provide the tools, structure, and expert guidance you need to navigate the complexities of construction with confidence.

We simplify the process by coordinating timelines, trades, and compliance requirements, maintain integrity and transparency across both costs and works delivered
