

genzon water purifiers...

- ... provide **alkaline, ionised and mineralised** pure drinking water.
- ... remove heavy metals and chlorine from water which are linked to rectal, colon and bladder cancer.
- ... can reduce the risk of gastrointestinal disease by removing e-coli, giardia and cryptosporidium.
- ... reduce contaminants including chlorine, fluoride and arsenic
- ... retain healthy mineral deposits that balance the pH of drinking water.
- ... are a fraction of the cost of bottled water
- ... purifies tap, tank, stream and bore water making it ideal for camping, boating and caravanning.
- ... are portable, perfect for busy people on the go and available in 2 sizes for both families and singles
- ... require no plumbing or electricity.

Available in 5 and 12 litre sizes

water

bringing water to life

Good hydration is the cornerstone of good health

Did you know the human body is 72% water. The brain 90% water?

Water is essential for practically every bodily function: it regulates our temperature, takes oxygen and nutrients to our cells, assists digestion, cushions our joints and cleanses or removes life threatening toxins and waste. Yet most men, women and children are constantly dehydrated – on average an adult needs over 2 litres of water every day.

genzon ionised water

Ionised water inhibits the spread of cancer cells as it has a very negative ORP value (Oxidation Reduction Potential), it neutralizes free radicals and it has its water molecules in smaller clusters than normal water.

Absorption at a cellular level is more rapid which aids in more effective hydration. The immune system is strengthened, enhancing the cellular integrity to ward off illness.

Ionised water flushes toxic waste from the body.

genzon water is **alkaline** purified water at a fraction of the cost of bottled water.

Leading Doctor gives his view on alkaline, ionised water

David S. Dyer N.M.D., Ph.D. "Restructured alkaline water may well be the best element or supplement you can put in to your body! Did you know the Japanese have researched this subject for over forty years and have found that drinking restructured alkaline water can relieve or reduce the three main causes for sickness, disease and premature aging I have been using this water for over 6 years and have seen similar results when it is used persistently and consistently. The water is smooth, delicious, hydrating, energizing, permeating, pH balancing and a strong antioxidant. Does this sound like the water you should be drinking? I wish you all good health..."

How the genzon water purifier works

genzon filters

- 1 Simply fill the upper level of the genzon purifier with tap water. Gravity takes it through the ceramic filter which removes organic & inorganic particles down to 0.2 microns and harmful bacteria (e-coli, giardia, cryptosporidium).

genzon cleanses

- 2 2nd stage of filtration. The water passes through the filter cartridge containing a range of raw materials including activated carbon, kuray carbon, catalytic carbon, ion exchange resin, tourmaline, silver & copper zeolite and silica which remove impurities such as bacteria 99.99% (including e-coli, giardia, cryptosporidium), heavy metals, chemicals (including chlorine, fluoride, arsenic), trihalomethanes, pesticides and odours whilst softening and improving the taste.

genzon re-mineralises & alkalises

- 3 Genzon mineral stones are mined from a deep sea source (between 300 and 600 metres below the surface) and contain a host of ionised minerals including calcium, magnesium, iron, potassium, phosphorous and sodium. They increase the water pH alkalinity and dissolved available oxygen which means the water is more easily absorbed into the blood stream and cells. Water is converted from acid to alkaline, neutralizing free radicals and re-balancing the body's pH.

genzon refreshes

- 4 Colloidal silver impregnated stones provide a natural anti-bacterial effect to the cleansed water ensuring the water in the lower storage tank remains fresh.

genzon magnetises & ionises

- 5 As you pour yourself a refreshing glass of purified alkaline water it is subjected to magnetic energy. (1200 gauss) via the genzon magnetic tap. This action breaks down the size of water clusters which aids rapid absorption into the body. It also helps increase the amount of oxygen (a natural antioxidant) in the water and improves the absorption of electrolytes such as magnesium, potassium and sodium.
