

# BENEFITS

## Leaf Protection

Gutter Guards block leaves and debris, reducing maintenance and preventing water damage while allowing water flow. Suitable for both residential and commercial roofing

## Bushfire Protection

Ember Guard blocks embers with non-combustible mesh ( $\leq 2$ mm aperture), compliant with AS3959-2018, protecting gutters in bushfire risk zones

## Pest Protection

Gutter Guard permanently seals gutters, blocking birds, rodents and pests. Low-maintenance DIY installation with a 20-year warranty and custom sizes/colours

## Reduce Water Damage

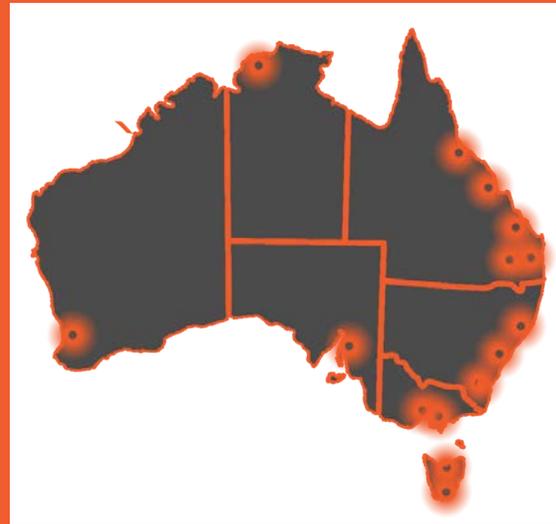

Gutter guards prevent clogging, roof leaks, foundation damage and mould. Ensure efficient drainage, reduces costly repairs, and promotes a healthier home.

## Rain Harvesting

Gutter guards filter debris and pests, improving rainwater quality, ensuring efficient collection, reducing maintenance and treatment needs for sustainable harvesting.

# INSTALLER NETWORK

At Gutter Guard Direct, we make it easy to protect your home or business by connecting you with trusted, local professionals who specialise in installing high-performance gutter guard systems.

## Why choose our installer network

- National coverage across major cities, and regional areas
- Installers experienced with all roof types, including tiled and metal profiles
- Knowledgeable about local council regulations and bushfire compliance
- Certified to work safely at heights
- Many offer workmanship warranties for added confidence

## DIY or professional installation?

While our kits are DIY-friendly for confident homeowners, we recommend using our **Find an Installer** service for the best results, especially on complex or high-risk roofs. Visit:

# WHAT'S IN A KIT

## Mesh

Our aluminium mesh is powder-coated with **premium AkzoNobel Interpon D1010**. Its fine aperture blocks small debris like gumtree leaves, ember fragments, and nesting pests, while still allowing maximum water flow.

## Saddles

Designed for all roof types, our saddles are **made from strong 0.55mm steel**. On metal roofs, the saddles secure the mesh by screwing into the ribs or corrugations.

## Trim

Trims are metal strips also **made from strong 0.55mm steel**, installed along the outer edge of the gutter. They anchor the mesh to the gutter lip, **creating a straight edge, maintaining tension, and fully sealing off the gutter.**

## Screws

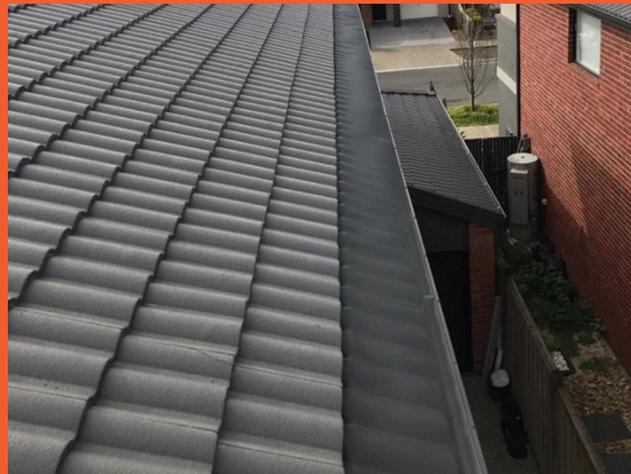

Our self-drilling hex-head screws are **corrosion-resistant** and **meet Class 3 durability standards**. Made for metal roofs, they deliver a **secure, long-lasting installation** that stands up to weather and vibration.

# WHY IT WORKS

Our **Integrated Mesh Gutter Guard System** features aluminium mesh screens, securely fixed to both the roof and the outer edge of the gutter. The system:

- **Creates a sloped barrier that directs water into the gutter while allowing leaves to dry and blow off over time**
- **Blocks leaves, sticks, embers, and pests from entering the system**
- **Is made from high-quality aluminium for maximum durability**

## Why They're Ideal for Australian Homes

**Integrated Mesh Systems** are built to withstand harsh weather and environmental risks, helping to:

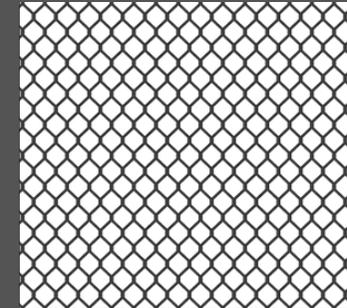

- **Reduce gutter blockages, overflows, and costly repairs**
- **Deter birds, rodents, and insects from nesting in gutters or entering the roof**
- **Provide bushfire protection by blocking embers**

**20 Year  
Product  
Warranty**

# WHICH MESH?

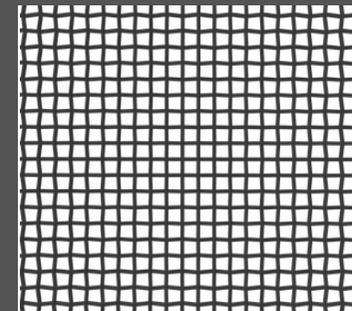

## 3.5mm Standard Mesh

Our 3.5mm Aluminium Gutter Guard Mesh features a unique diamond 3D profile for optimal water flow and is **up to 3x thicker than standard mesh from our competitors** for superior durability on your roof

Our mesh is enhanced with **premium AkzoNobel Interpon D1010 powder coating** and has **passed a 1,000-hour salt spray test, equivalent to 30+ years in coastal environments, outperforming others in terms of longevity and resilience**. In environments with heavy and large debris, the 3.5mm Standard Gutter Guard Mesh is an ideal solution for keeping leaves, pests and vermin out of your gutters.

## 2mm Ember Guard Mesh

Our 2mm Aluminium Ember Guard mesh has an aperture of less than 2mm that blocks burning embers from entering gutters and roof cavities during bushfires while allowing water to pass through.

Our **Ember Guard mesh is certified by the CSIRO** with a flammability index of "0" and meets:

### Bushfire Attack Level Rating (BAL):

- **Ember Guard:** BAL-12.5, BAL-19, BAL-29
- **Gutter Guard:** BAL-12.5, BAL-19, BAL-29, BAL-40, BAL-FZ

Our Ember Guard Mesh is also enhanced with **premium AkzoNobel Interpon D1010 powder coating**.
