STONE EFFECT and RESURFACING

STONE EFFECT RESURFACING RANGE

RESURFACING

Concrete resurfacing is an extremely practical and economical alternative to replacing your concrete surface. Not only is it cost-effective, but it delivers unmatched results to create a concrete surface that looks stunning, lasting for years. Resurfacing can also improve the value of your home. It is applied as a spray on concrete in a variety of finishes to compliment your home. Once we're done, you will have a fresh look that will improve your home's kerb appeal.

REPAIR

Over time, cracks and discolouration begin to appear on your concrete driveway, patio or paths. Not only are these unsightly, but they also pose a risk of slip and fall hazards. Our trained and experienced technicians can fill cracks, remove stains and scarify/ grind down trip hazards.

STENCILLING

We offer concrete stencils in a range of colours and designs to give your patio or driveway a unique look. All our stencil patterns are durable and are designed to offer lasting results.

SEALING

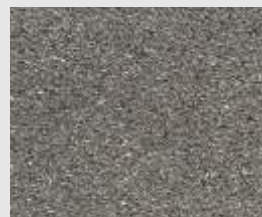

Once your concrete surface is sealed, it will be stain-resistant and waterproof whilst preserving the integrity and brightness of your concrete for years. All our floor coatings are designed to stand against the elements and every day use. What's more, our sealing makes the surface easy to clean and maintain.
