ACCESS JUST GOT SMARTER

McGrath Smart Locks
MAKING ACCESS EASIER

McGrathSmartLocks.com.au

Most brands start with a product. Ours started with a problem.

In 2016, Graeme McGrath — a builder by trade from Brisbane, was using digital locks on job sites across QLD and kept running into the same issue: digital locks that looked good on paper but didn't hold up. The convenience was promising, but the products weren't. Some looked the part, others had features, but none were robust enough or made to withstand Australian conditions.

A Smarter Way to Secure

The journey began with extensive search. Over time, hundreds of digital locks were tested — across brands, styles, and specs — all in search of something robust enough for the Australian environment.

By 2020, the business had evolved — transitioning from digital to truly smart locks, and partnering with TTLock to bring smart access features into homes and businesses across the country. Around the same time, the team developed their own product, tailored to both residential and commercial applications.

Access Just Got Smarter

Today, we design and supply trade-grade digital smart digital locks that blend:

- **Security you can trust**
- **Style that suits modern spaces**
- **Convenience for how we live and work today**

Whether you're protecting a home, multi-dwelling project, or commercial property, McGrath Locks are built to perform — and built to last.

Aussie-Designed Solutions. Made for Aussie Living.

Proudly Aussie-designed, our products are engineered specifically for our unique and often demanding climate. From blazing sun and coastal air to dust, dirt, and daily wear — we don't just test for compliance, we test for the real world. Because when you're trusted to secure what matters, there's no room for compromise.

**From the Trade, For the Trade**

Our products are trusted by locksmiths, builders, and security professionals across the country.

Our promise is to deliver smart access solutions that blend **technology with toughness**, and **design with dependability.**
