## DEGROUT

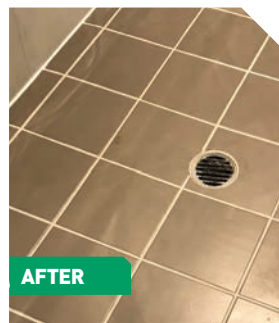

Megasealed Technicians degROUT the shower perimeter, floor waste, wall-to-wall junctions and hob joints. They use a diamond tip grinder to ensure a high quality result. This is a crucial step to safeguard that the surfaces are properly prepared before a Megasealed product is applied.

### Proven benefits:

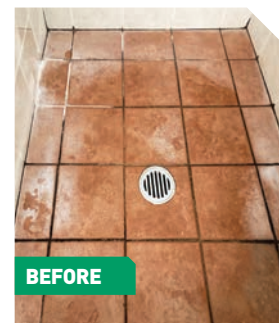

- ✓ Tiles don't need to be removed
- ✓ The shower can be used the next day
- ✓ Service time between 2.5 to 4 hours
- ✓ No mess
- ✓ Adjoining areas are not affected or inconvenienced

## TILING, RE-TILING AND WATERPROOFING

If the damage to your shower or balcony is greater than leaking grout joints, our Megasealed technicians will remove tiles that are badly damaged and re tile the area. Our rapid waterproofing system will ensure that there are no more leaks and reduce the down time of your shower or balcony usage.

## REGROUT FLOOR AND JOINTS

The grout is replaced with one of our exclusive 2-part epoxy system – MG14™. An MG14™ surface is chemical, abrasive, water and grease resistant. A sealant is also applied to the shower floor. Perimeter joints are sealed using our extremely flexible Megasealed sealant.

## HAVE YOU NOTICED ONE OF THESE MOST COMMON SIGNS OF A LEAK?

- Bubbled paint
- Cracked or loose tiles
- Rusty or damaged door frame
- Grout between the tiles is missing
- Damage to the ceiling below
- Smelly or damp carpet
- Buckling floor

**Megasealed Consultants are equipped with state of the art moisture meters and thermal cameras to assist in diagnosing leaks.**

## BALCONY DEGROUT AND REGROUT

**Megasealed offer three different balcony services that will solve any issues you are experiencing with your balcony. Services are tailored to the extent of damage to the balcony.**

### Standard service

Suitable for balconies that have no structure damage or need a spruce up. This cost effective choice includes a complete degROUT and regROUT with MG14™ epoxy grout to seal the grout joints.

### Tile over tile service

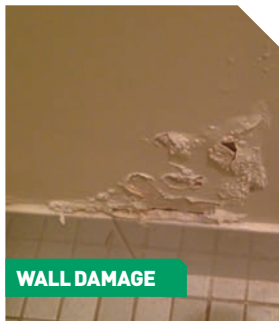

Available if the damage is greater than leaking grout joints. Waterproofing membrane is applied to the existing tiles and then new tiles are laid over the existing tiles using MG14™ epoxy grout to seal the grout joints.

### Complete re-tile service

Applied when the balcony tiles are badly damaged or the fall and screed of the balcony needs improving. The existing tiles and screed are removed, the screed is replaced, waterproofed and re-tiled and MG14™ epoxy grout is injected into all grout joints.
