

NURACOM PTY LTD

NURACOM®

THE END OF WEATHER-DEPENDENT LAUNDRY

Dry clothes faster & cleaner.
Without the worry of weather.

BREEZE • AERO • STRATOS

THE COMPLETE RANGE

A NOTE ON WHY WE BUILT NURACOM

The laundry was the last room to be *reconsidered*.

Australian homes were never built for the way we live now. Smaller floor plans. Heavier loads. Hotter summers and wetter winters. And a tumble dryer in the corner, quietly costing more each year than the appliance itself.

Nuracom began with a simple, stubborn idea — that drying clothes shouldn't depend on the weather, the season, or the size of your laundry. That a well-designed home should dry as it lives: quietly, efficiently, and out of the way.

Every Nuracom is engineered in Australia, mounted to your ceiling, and built to last a decade. Inside this catalogue you'll find the full range, the thinking behind it, and the quiet maths of an appliance that pays for itself, then keeps paying you back.

Lifestyle & Contact	14
---------------------	----

WHY NURACOM

A smarter way to dry — *every day*, regardless of the weather.

Ceiling-mounted. Turbo-fan powered.

Nuracom is engineered to dry clothes in hours — not days. Many cycles use less energy than a typical light bulb, with a focus on gentle, low-heat drying and a warranty designed to outlast many tumble dryers.

01 / BENEFIT

Dries in hours, not days

Up to 6 turbo fans force constant airflow through your clothes. Indoor drying engineered to work efficiently, every time.

02 / BENEFIT

From under \$1 per full cycle

Based on AU's average ~36c/kWh, a 2-hour Nuracom cycle is estimated at around 57¢ — versus an indicative \$1.42 for a comparable tumble-dryer load. Actual costs vary by usage and tariff.

03 / BENEFIT

Flat, wrinkle-free finish

Clothes hang to dry — no tumbling, no shrinkage, no heat damage. Dry and flat, ready to wear without ironing.

04 / BENEFIT

Up to 5-year warranty

5 years on the motor, 2 years on parts, 1 year of full unit service — backed by an Australian-based team.

IN EVERY NURACOM · STANDARD ACROSS THE RANGE

01

Ultra-Silent Motor

Below conversation volume under full load.

02

Obstruction Sensing

Auto-stops on contact — family safe.

03

Smart Home App

Full iOS & Android control included.

04

Standard AU Plug

No electrician. If you have the outlet. Easy Install.

YOU SAVE UP TO - LOWER ENERGY USE, REAL LONG TERM SAVINGS.

\$354 per year*

Estimated using an average Australian electricity rate of 36c/kWh. Based on NuraCom 800W models (Breeze and Aero) used 3 times per week for 2 hours per cycle, compared with a conventional vented tumble dryer using approximately 3.95kWh per load.

CHOOSE BREEZE IF

You're a couple, a single, or a smaller home.

Two to three loads a week. A laundry that needs to feel calm and uncluttered. Our entry point is beautifully engineered, no compromises on the essentials.

CHOOSE AERO IF

You're a family of three to five.

The bestseller. Enough capacity for school uniforms, sheets and towels, plus UV-C and voice control — the model most Australian families settle on.

CHOOSE STRATOS IF

You want the best of everything.

Large families, premium renovations, extra capacity and features. Enjoy six fans, negative-ion dust mite removal, digital display and the top of the range with nothing held back.

BREEZE · IN USE

Made for singles, couples and smaller homes.

Apartments and townhouses. Two to three loads a week. Designed for renters and owners who want a calm, considered laundry — without overspending on capacity they won't use.

2–3 PEOPLE

2–3 LOADS / WK

FEATURE · 01

Twin turbo fans, ultra-silent.

Two opposing fans circulate room air through the load — drying in hours, at a sound level below quiet conversation.

FEATURE · 02

Integrated warm LED lighting.

A high-CRI panel built into the underside — replacing the laundry's overhead light, not adding to it.

FEATURE · 03

App and remote control, included.

iOS and Android app for scheduling, plus a tactile lift-and-drop physical remote for everyday use.

\$268

ESTIMATED
SAVED PER
YEAR

Estimated using an average Australian electricity rate of 36c/kWh. Based on Breeze (800W) used 3 loads per week for approximately 2 hours per cycle, compared with a conventional vented tumble dryer. Five-year estimate assumes similar usage over time. Actual savings vary depending on electricity tariffs, usage patterns, climate and drying conditions

SUPPORT

Made for families of three to five — the *everyday* choice.

School uniforms, sheets, towels, sports kits. Aero is the model the majority of Australian families settle on — enough capacity for the weekly load, with UV-C disinfection and voice control built in.

3–5 PEOPLE

5–6 LOADS / WK

FEATURE · 01

Four turbo fans, full coverage.

Doubled airflow over Breeze — every garment in the load gets even, fast drying with no damp pockets in the centre.

FEATURE · 02

UV-C disinfection.

UV-C technology helps reduce bacteria and odours during drying, making it particularly useful in winter and for households with allergies.

FEATURE · 03

Voice + tri-tone LED.

Works with Google Assistant and Apple HomeKit. Three-tone LED — warm, cold and mid — replaces your laundry's overhead light.

SPECIFICATION	AERO	NOTES
Capacity	40 kg	Family weekly load
Turbo Fans	4	Quad-axial array

Made for larger families and *premium homes.*

Renovations, holiday homes, and any household that wants the very best. Six fans, negative-ion air, and a digital display — Stratos is the model with nothing held back.

5+ PEOPLE

7+ LOADS / WK

FEATURE · 01

Six turbo fans, two hours.

Maximum airflow array — a full 45 kg load dries in roughly two hours. The fastest indoor drying in the Nuracom range.

FEATURE · 02

Negative ion air.

Negative ion technology may help reduce odours and static, leaving clothes feeling fresher. Subjective results vary by garment and conditions.

FEATURE · 03

Digital display.

An integrated readout for temperature, time remaining and current cycle — the only Nuracom with at-a-glance status on the unit itself.

SPECIFICATION	STRATOS	NOTES
Capacity	45 kg	Largest in range, double scissor arm stability

Warranty	5 / 2 / 1	Motor / parts / service

Up to \$412

SAVED · PER YEAR*

Disclaimer - Estimated using an average Australian electricity rate of 36c/kWh. Based on Stratos (900W) used 7 loads per week for approximately 2 hours per cycle, compared with a conventional vented tumble dryer. Actual savings vary depending on electricity tariffs, usage patterns and drying conditions.

Up to \$2,060

SAVED · 5-YR WARRANTY*

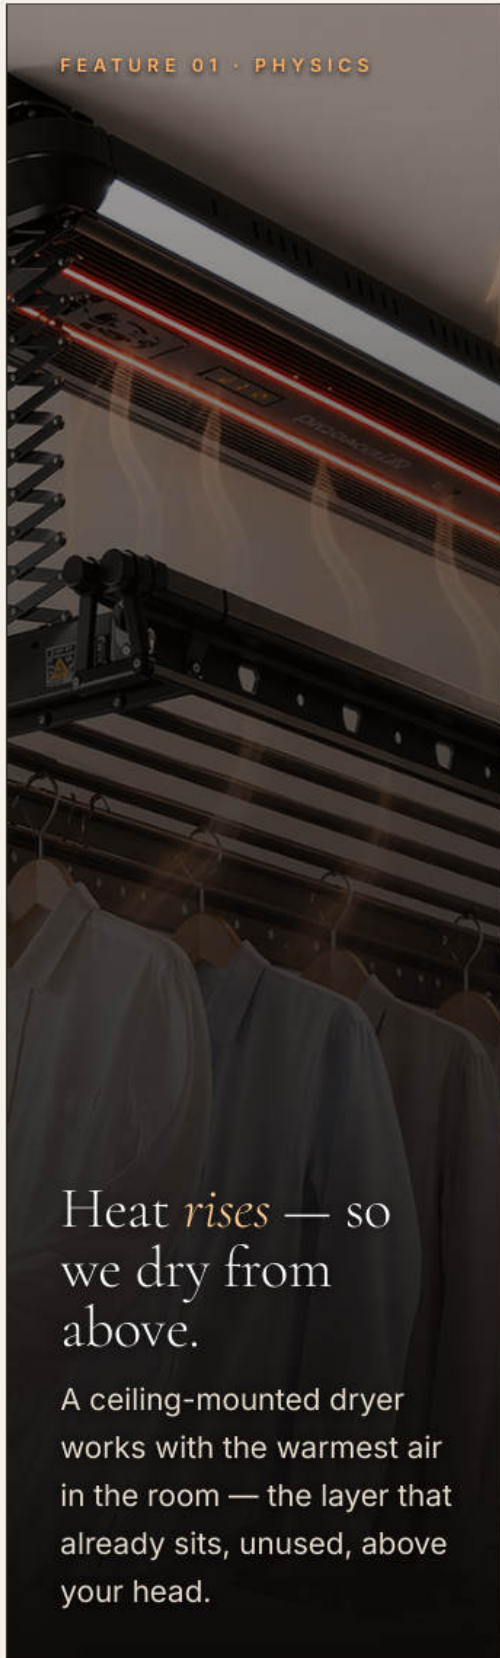

*Estimated power-only savings across the 5-year motor warranty period. Based on factory calculations.

THE MECHANICS

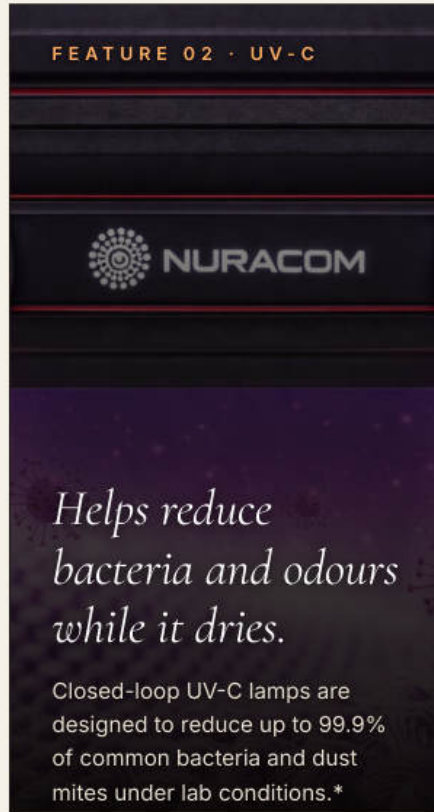

Anatomy of a *Nuracom*. From ceiling to garment.

A Nuracom isn't a clothes airer with a motor bolted on. It's an integrated airflow, lighting, and lift system — designed in Australia, engineered to be ignored. Here's the cabinet, opened up.

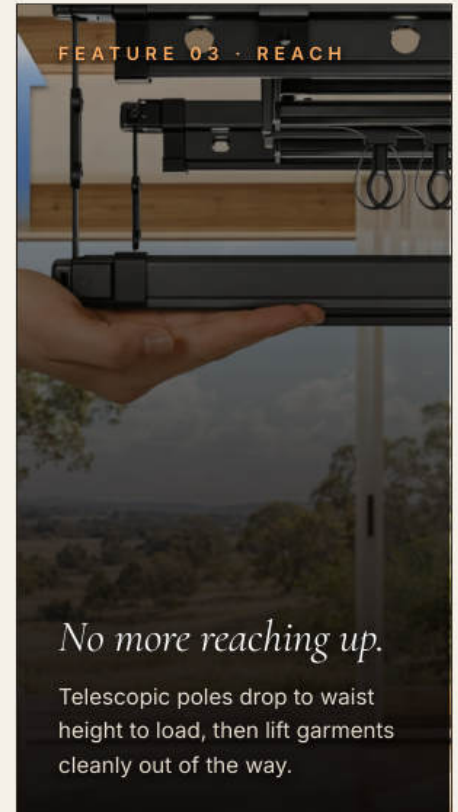

FEATURE 01 · PHYSICS

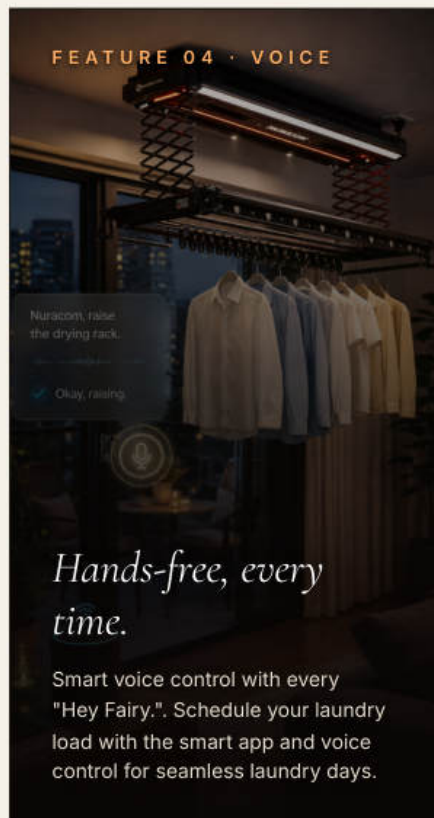

FEATURE 02 · UV-C

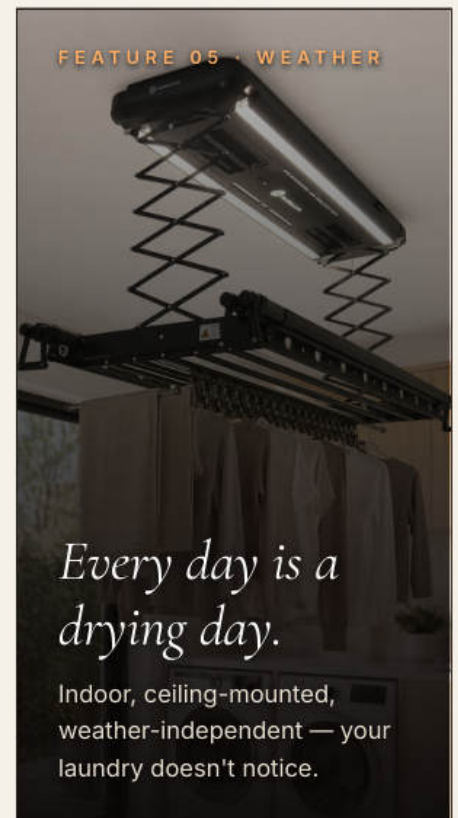

FEATURE 03 · REACH

FEATURE 04 · VOICE

FEATURE 05 · WEATHER

CARE & SAFETY

Kinder to fabric. Safer for *the family*.

A Nuracom doesn't tumble, doesn't bake, and doesn't shed microfibres into a lint trap. Clothes hang flat and dry in still warm air — the way a careful housekeeper would do it, only faster, and without the watching.

A QUIETER STANDARD

*The way faster,
easier, and
better way
to dry.*

01 · FABRIC

No tumbling. No shrinkage.

Clothes hang to dry in still warm air — cotton stays cotton, wool stays wool, and the slow felting that makes everything a half-size smaller never happens.

Wool / merino	SAFE
Cotton / linen	SAFE
Synthetics / silk	SAFE

02 · FAMILY

Obstruction sensing, every model.

Internal load cells stop the lift instantly on contact — a child's hand, a pet, the corner of a basket. Standard across the range, no premium.

Auto-stop on contact	YES
UV-C shielding	HUMAN DETECTION
Heat output	AMBIENT

03 · FUTURE

Engineered to last.

5 years on the motor, 2 on parts, 1 year of full-unit service — backed by an Australian-based team. Spare parts kept in stock, in Australia, for the life of the product.

Motor warranty	5 YEARS
Parts warranty	2 YEARS
Support	24/7 AU

AUSTRALIAN DESIGN

*Tested, certified,
and built to last
in Australian
homes.*

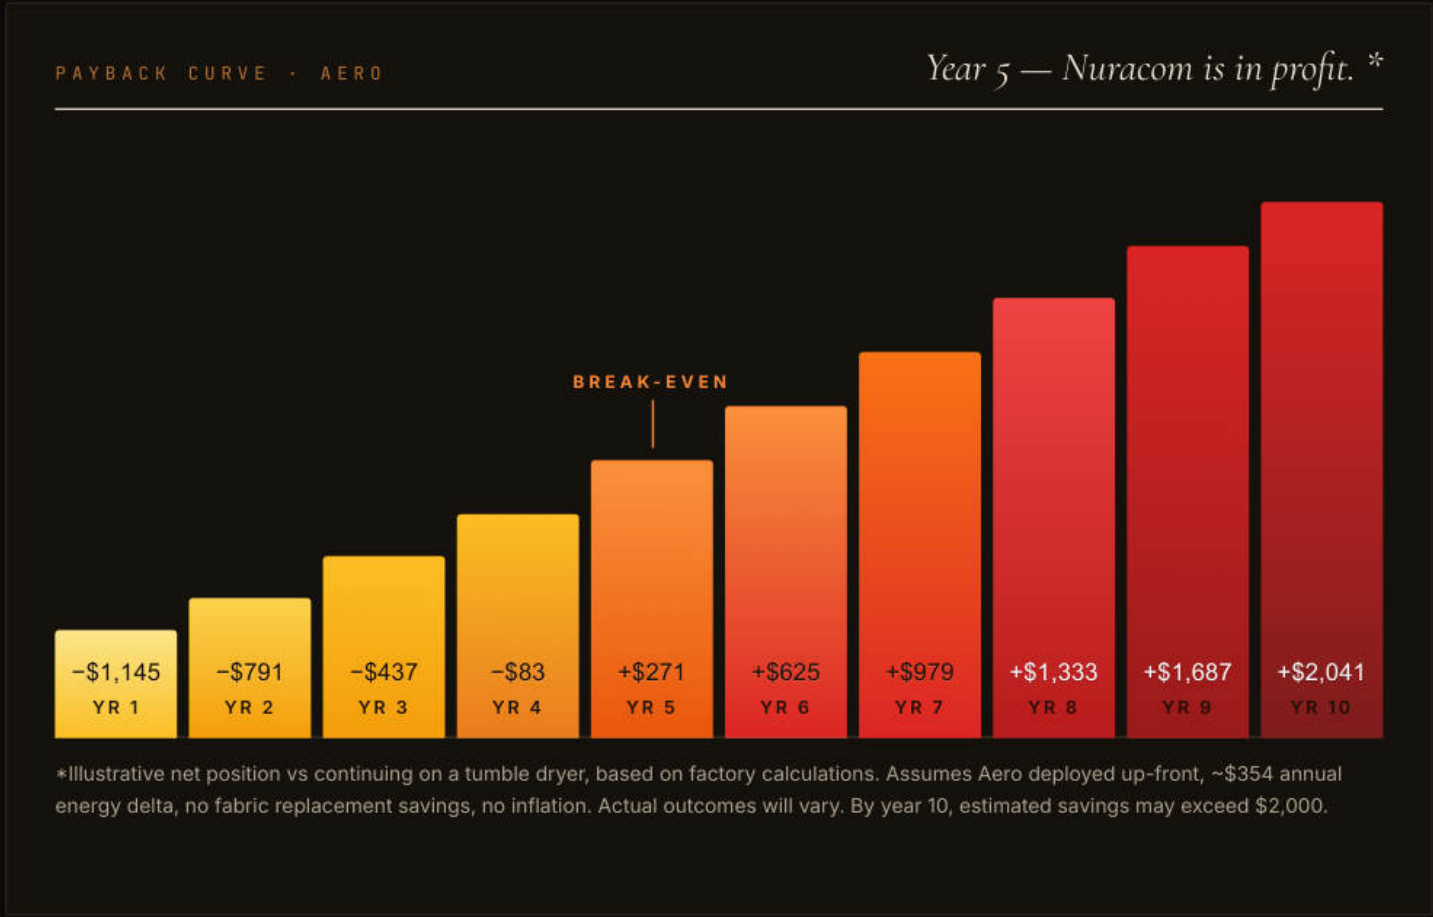

Designed and tested to align with relevant Australian electrical safety standards (e.g. AS/NZS 3350). UV-C operation is closed-loop and shielded; emission compliance tested in line with IEC 62471 guidelines. Negative ion output is designed to remain well below WHO indoor-air guidance.

THE COST OF DRYING

An appliance that *can pay* for itself.

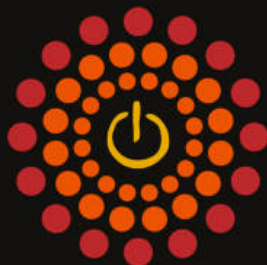

A tumble dryer's true cost isn't its sticker — it's the bill, year on year, that quietly eclipses the appliance itself. A Nuracom flips that maths the week it's installed.

TUMBLE DRYER \$443 Annual energy · 6 loads/wk · ~3.95 kWh / cycle	NURACOM AERO \$89 Annual energy · 6 loads/wk · ~2.4 kWh / cycle	SAVING (UP TO) \$354/yr* *Estimated energy savings based on factory calculations. Actual results vary by usage, and household.
--	--	---

01 <i>Energy</i> Up to ~\$354/yr estimated savings based on AU avg ~36¢/kWh. The single largest indicative line item.	02 <i>Fabric</i> Independent research suggests tumble drying can shorten garment life by ~30% (CHOICE, 2023). Hang-drying typically preserves it.	03 <i>Ironing</i> Flat hang-drying typically reduces ironing time — for many households, by most of it.	04 <i>Floor space</i> The clothes horse retires. The laundry returns to being a laundry, not a drying room.
--	--	--	--

INDICATIVE FIGURES ONLY. SOURCES: CANSTAR 2024 · CHOICE AUSTRALIA 2023 · AEMC RESIDENTIAL ENERGY REVIEW · NURACOM INTERNAL FACTORY TESTING. ACTUAL RESULTS VARY BY MODEL, USAGE, TARIFF AND HOUSEHOLD.
