WINE CABINETS

Climate-Controlled Wine Cabinets

STORAGE FOR EVERY
COLLECTION

Storage for every collection

At LeCavist, we craft accessible, high-quality wine storage solutions that cater to everyone, regardless of their level of wine knowledge.

Our mission is to make premium wine storage for every wine lover - helping **YOU, preserve, grow and enjoy** your collection with ease.

Alex Clerch - Co-Founder of LeCavist

Fusion of Cultures and Traditions

Growing up in France, I was immersed in the rich culture of winemaking and cellaring. The memory of opening perfectly aged wine from an underground cellar has stayed with me. When I landed in Australia, I discovered an avid community of wine lovers, but also recognised the challenges posed by its climate.

This inspired me to create a solution that brings the best of both worlds together - **LeCavist wine cabinets, recreating the same conditions you'll find in French underground wine cellars.**

Meeting a need with passion

"At LeCavist, we believe in making quality wine storage accessible to everyone. Our mission is to help wine enthusiasts of all backgrounds enjoy and preserve their favourite wines, one cellar at a time."

Alexandre Clerch - Co-Founder of LeCavist.

CRAFTED FOR EXCELLENCE, DESIGNED FOR WINE LOVERS

Our wine cabinets are built with care and quality, inspired by the rustic charm of French cellars. They bring a perfect mix of style and practicality, making it easy to store and enjoy your wines at home.

Protecting your investment, preserving your passion.

Wine is more than just a beverage — **it's a journey**, an evolving experience that deserves the right care. Proper storage is essential to preserving each bottle's integrity and unlocking its full potential. In Australia's warm climate, maintaining optimal temperature and humidity is key to protecting your collection and ensuring every pour is as exceptional as the first.

HONOURING THE CRAFT OF WINEMAKING

Great wine begins with passion—winemakers rising with the sun, nurturing vineyards, and perfecting each vintage with care. Every bottle tells a story of terroir, time, and expertise.

But wine is fragile without proper storage, its journey can be lost. A LeCavist wine cabinet protects your collection, ensuring each bottle matures as intended—so when the moment is right, you experience it at its very best.

Because true wine lovers know: great wine deserves great care.

LeCavist – Built around the international rules of cellaring

STABLE TEMPERATURE: THE KEY TO PRESERVATION

One of the most critical factors in wine storage is temperature. Fluctuations in temperature can cause chemical reactions within your wine, leading to premature aging, oxidation, and ultimately, a diminished drinking experience.

For wines to age gracefully, they need a stable environment. **The ideal cellar temperature sits between 12°C and 14°C, with minimal fluctuations.** Exposure to heat or cold can compromise a wine's balance, stripping it of its depth and complexity.

HUMIDITY: MAINTAINING THE BALANCE

Humidity is just as important as temperature. Too much can damage labels, while too little can dry out corks, leading to oxidation. The ideal humidity range is between 50% and 80%, keeping corks airtight and preserving your wine.

Each of our LeCavist wine cabinets maintain humidity levels above 50% ensuring your collection is stored correctly, remains moist and airtight, thus preserving the integrity of the wine.

LeCavist

FRESH AIR FOR PERFECT AGEING

A humid environment can lead to mold formation, which not only affects your wine's taste but, more importantly, compromises the integrity of your labels.

That's why our wine cabinets feature **built-in fans** to maintain steady circulation, preventing stale air from affecting your collection. **Charcoal filters further purify the environment**, removing impurities and preventing mold.

ANTI VIBRATION

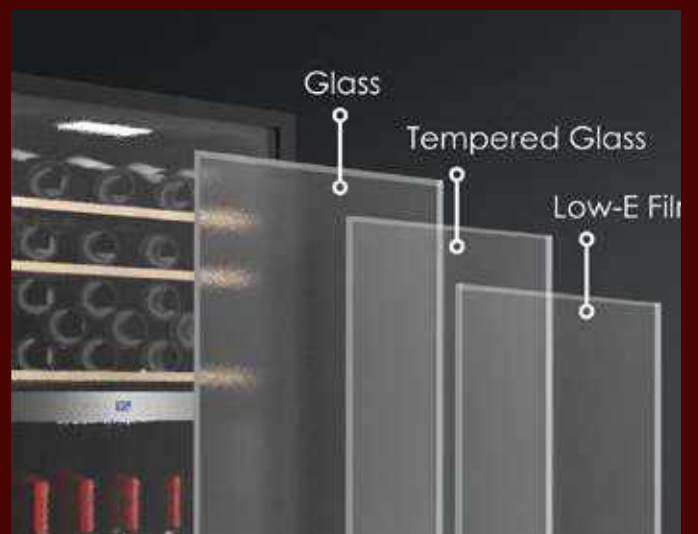

Even subtle vibrations can disrupt wine's ageing process. That's why our **compressors are fitted with rubber to absorb movement**, while sturdy wooden shelves provide an extra layer of stability. This ensures your wine rests undisturbed, ageing gracefully until the moment it's ready to be enjoyed.

UV PROTECTION

Light exposure, especially UV rays, can prematurely age wine and alter its delicate flavours. **LeCavist wine cabinets feature a 3-layer tempered glass door, specially heat-treated for added strength and insulation.**

This not only protects your collection from harmful UV rays but also helps maintain a stable temperature and humidity.

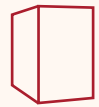

LeCavist

How to select your wine cabinet

Selecting the right wine cabinet requires careful consideration of three key factors: size, installation type, and temperature zones. First, determine the size based on your collection. Next, decide between a freestanding or built-in model and finally, consider the temperature zones.

SIZE

**SMALL
WINE CABINET**
12-63 bottle capacity

A single-zone cabinet is perfect for storing one type of wine at a consistent temperature, while dual-zone models accommodate reds and whites separately. For the ultimate versatility, triple-zone cabinets cater to a broader selection, ensuring optimal ageing and serving conditions for various wines.

**MEDIUM
WINE CABINET**
76-168 bottle capacity

This wine cabinet offers a perfect storage solution for small collections or those just starting to build their wine cellar. The small capacity ensures your wines are stored with care and easily accessible.

**TALL
WINE CABINET**
188-303 bottle capacity

This wine cabinet provides significant storage space for a large collection, allowing you to keep your wines organised and easily accessible.

Ideal for large collections. The spacious interior ensures that you can organize your wine with ease and store it at the optimal temperature.

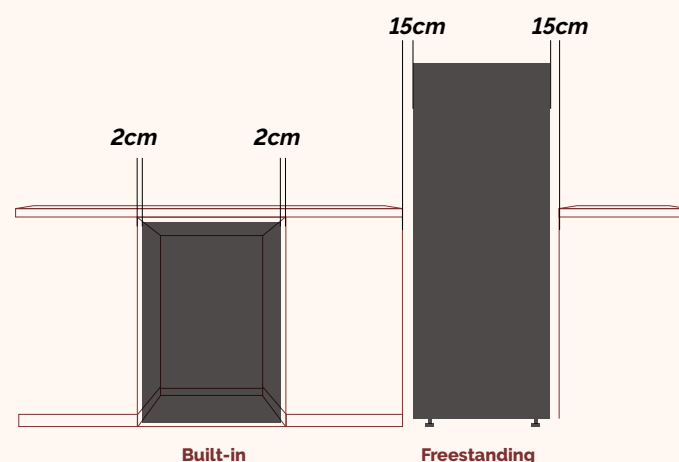

INSTALLATION TYPE

Freestanding units offer flexibility in placement but need proper ventilation, while built-in cabinets seamlessly integrate into kitchens or bars.

Ventilation requirements:

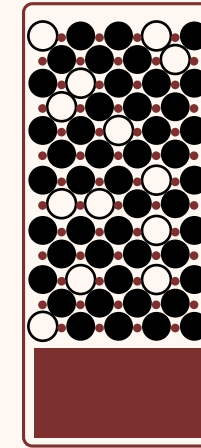

Freestanding units: 15cm on sides and top - 10cm at the back.

Built-in units: 2 cm on sides, top and back.

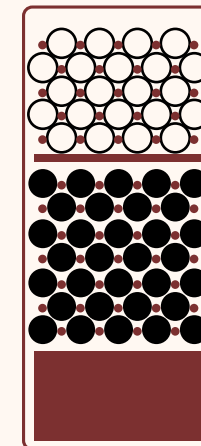

LeCavist

TEMPERATURE ZONES

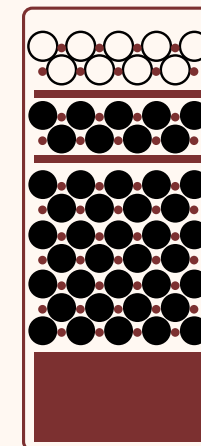

Single Zone

All wines—reds, whites, and Champagne—are best cellared at a consistent temperature of 12°-14°C. A Single Zone wine cellar provides the perfect environment for long-term storage and aging. Alternatively, it can be set to serve wines at their ideal drinking temperatures: 7°-12°C for whites or 14°-18°C for reds.

Dual Zone

A Dual Zone wine cellar offers flexibility for storing and serving both reds and whites at their ideal drinking temperatures. Set one compartment to 7°-12°C for whites and Champagne, and the other to 14°-18°C for reds. Alternatively, use one zone for serving whites and the other at 12°-14°C for proper cellaring.

Triple Zone

Offering ultimate versatility, a Triple Zone wine cellar allows you to store and serve different wine styles at their ideal temperatures. Set the top at 7°C for whites, the middle at 12°C for cellaring, and the bottom at 18°C for reds, ensuring both optimal serving conditions and proper aging within your LeCavist.

LeCavist

Our extensive range

Our premium wine cabinet range features over 45 models to suit every wine enthusiast's needs. Whether you require a single-zone cabinet for preserving your favourite wine, a dual-zone option for maintaining reds and whites at their ideal temperatures, or a triple-zone solution for the ultimate wine connoisseur, we have the perfect choice for your collection.

With some available in both freestanding and built-in designs, our cabinets blend seamlessly into any space—whether it's a contemporary kitchen, a sophisticated cellar, or a stylish entertaining area. Crafted for optimal wine preservation with precise temperature control, UV protection, and humidity regulation, our range ensures your wines age beautifully and are always ready to be enjoyed.

Signature Service

FREE DELIVERY

We offer complimentary delivery for all items, regardless of size or bulkiness. Our experienced delivery personnel are adept at handling items regardless of whether they need to be transported upstairs or downstairs. We have an extensive coverage network, reaching over 95% of Australian

addresses, and offer next-day delivery in most major metropolitan areas. At checkout, you have the flexibility to select your preferred delivery date, and we'll provide you with a precise delivery window to eliminate any waiting time.

FREE CONNECTION

When you purchase a new wine cabinet from us, complimentary installation service is included. Additionally, we offer complimentary removal of your old

appliance upon request, ensuring a hassle-free experience for you. Our installation experts will ensure that your new appliance is installed properly, leaving no mess behind.

FREE REMOVAL

Leave the heavy lifting to us when it comes to removing your old fridge. Our capable delivery team provides complimentary removal and recycling of old appliances. This service applies to any old appliance, provided it is disconnected, pulled out of

the cavity, empty, and prepared for removal upon our arrival with your new appliance. If the appliance isn't disconnected on the delivery day, no worries – we can schedule a return visit for pickup once it's ready.

PRICE MATCH GUARANTEE

We've established our Price Match Guarantee to ensure you receive the most competitive pricing. To take advantage of this offer, simply provide details of the advertised price and the retailer where you found it. Our dedicated customer service team will promptly verify the price match via phone.

FLEXIBLE PAYMENT OPTIONS

We prioritize providing you with flexibility, which is why we offer a diverse range of payment methods at LeCavist. Whether you prefer Credit Card, or AfterPay, we accommodate your preferences with a comprehensive selection of options.

Furthermore, we accept Visa, MasterCard, and American Express without any additional surcharges.

Capacity & Shelf Stacking

ARRANGING VARIOUS BOTTLE SHAPES AND SIZES

When considering the capacity of a wine cabinet, it is important to note that manufacturers base their stated capacities on standard 750mL Bordeaux bottles. This has long been the industry standard, as this bottle shape was historically the most common.

Although many bottles may resemble the classic Bordeaux style, they often vary significantly in diameter, height, neck length,

and shoulder shape—even among wines from the Bordeaux region itself. Below is an illustration of the standard 750mL Bordeaux bottle, which serves as the reference point for wine cabinet capacities.

While wine cabinets are designed to hold a range of bottle shapes and sizes, this can sometimes reduce their maximum storage capacity.

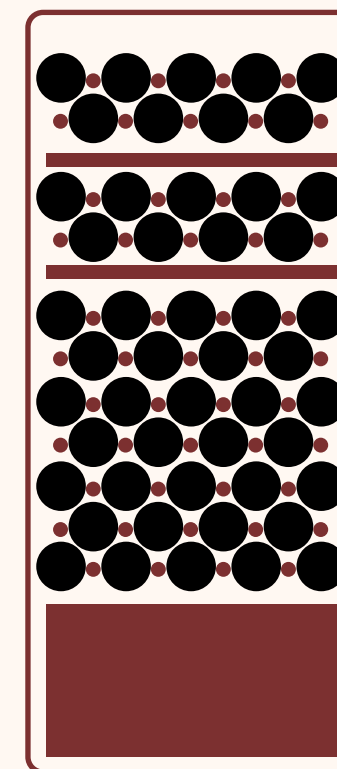

MAXIMISING STORAGE CAPACITY

To achieve the highest possible bottle count in most LeCavist wine cabinets, bottles should be positioned with their necks interlocking, as shown in the diagram.

When arranging your cabinet, bear in mind that some bottles may not fit directly opposite each other. To make the best use of space, position bottles next to others with a more compatible shape.

Reaching full capacity often requires stacking bottles in multiple layers, so planning your layout from the start is essential (see tip #3 for guidance on multi-level stacking).

Another key consideration is that adding more shelves generally reduces overall capacity, as they take up space and limit the diameter of bottles that can fit.

TIP: Removing a few shelves can create extra storage space, particularly for bottles with non-standard shapes or larger diameters (such as Champagne bottles). This frees up vertical space, allowing for more flexibility in storage.

For this reason, some wine cabinets require fewer shelves than those originally supplied to reach their maximum capacity. The default shelving arrangement in these models is typically designed for easier access rather than maximising bottle storage.

To clarify these capacity considerations, we now distinguish between two capacity ratings in our product descriptions:

EASY Capacity: The number of bottles that can be stored with all supplied shelves installed, allowing for 4–5 stacking levels per shelf.

MAX Capacity: The maximum possible bottle count, which in some models requires removing shelves.

ORGANISING FOR ACCESSIBILITY

For ease of use, it is helpful to store bottles from the same case together. In the diagrams above, bottles from the same case are represented in matching colours.

Stacking bottles from the same case

vertically allows for easy access to different wines and helps interlock bottles efficiently by aligning compatible shapes neck-to-neck.

ARRANGING WINES FOR AGEING

When filling your cabinet, consider placing wines intended for long-term ageing towards the back of the shelves, while keeping those meant for near-term consumption at the front.

During your annual cellar maintenance take the opportunity to reassess which bottles should be moved forward as they approach their ideal drinking age and which should remain stored for further maturation.

LeCavist
