THE MKII BRACKET

The **MKII Bracket** is our shortest Bracket available, measuring at an adjustable height of **250mm to 310mm**.

Measurement points shown to the right. Unlike the S-Series, this bracket doesn't come with an **L Plate**.

THE MKII KIT INCLUDES:

- 1X TOP BRACKET
- 1X BOTTOM BRACKET
- 1X HEX NUT
- 1X WEATHER SEAL

ROOF EXTENDA BRACKETS

Roof Extenda Pty Ltd specialises in innovative solutions for carports and pergolas, offering products that deliver **superior structural support**.

Our unique Brackets elevate the roofline above existing gutters, enhancing ventilation and reducing summer heat. When building a carport, this added height accommodates larger vehicles, including 4WDs, boats, and caravans.

Our Range is only suitable for **Timber Frame Houses**. However, a new range of **Steel Frame House Brackets** are **coming soon!**

QUICK AND EASY TO INSTALL. NO SPECIAL TOOLS REQUIRED!

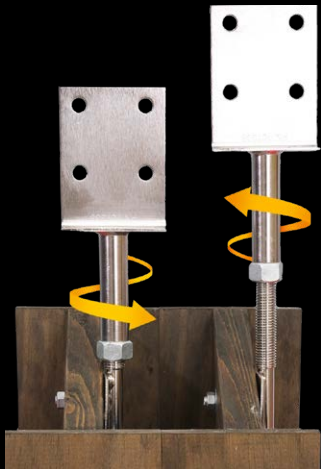

ADJUSTABLE WITH A TWIST

The Roof Extenda Bracket is adjustable. The top bracket twists down onto the bottom bracket and is locked into place with the Hex Nut. Giving you the exact height you need for your project.

The MKII - S500 Brackets are available in **Mild Steel** and **316 Marine Grade Stainless Steel**.

The **S600** is only available in **Mild Steel**. However, a **Stainless Steel** option is **coming soon!**

THE S-SERIES BRACKET

The S-Series has **4 different sizes** available. The S300, S400, S500 and the new S600. These versatile sizes offer a **wider range of heights** for your Flyover Pergola or Carport.

THE S-SERIES KIT INCLUDES:

- 1X TOP BRACKET
- 1X BOTTOM BRACKET
- 1X L PLATE
- 1X HEX NUT
- 1X WEATHER SEAL

S-SERIES HEIGHTS

THE SHADE SAIL ANCHOR

Roof Extenda's Shade Sail Anchor provides a better way of **attaching shade sails** to buildings. Shade Sail Anchors are crucial connection points that transfer wind loads from the sail to a secure structure. Rather than securing to your gutter or wall, the anchor is **bolted directly** to the **rafter** and **top wall plate** of the existing building. This offers a structurally sound fixing method, ensuring the strongest means of support.

Whether integrated into your garden structure to shield plants or placed virtually anywhere around your house and yard, shade sails offer flexible solutions for all spaces.

OFFERS A STRUCTURALLY SOUND FIXING.

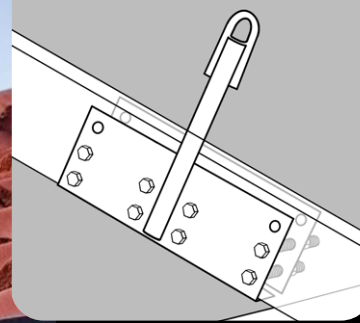

The Anchor has been **strength tested**. When bolted in the top holes, it can withstand 2.3kN of force. When bolted in the middle holes, it can withstand 1.3kN of force. Therefore, we recommend **all bolt holes** in the Anchor be utilized. We advise you to **carefully evaluate** the shade sail size, location, wind category & installation design before purchasing.

THE SSA KIT INCLUDES:

1X SHADE SAIL ANCHOR

1X L PLATE

1X SEAL OPTION

ROOF SAFETY ANCHOR

THE RSA KIT INCLUDES:

1X ROOF SAFETY ANCHOR

1X BACKING PLATE

1X SEAL OPTION

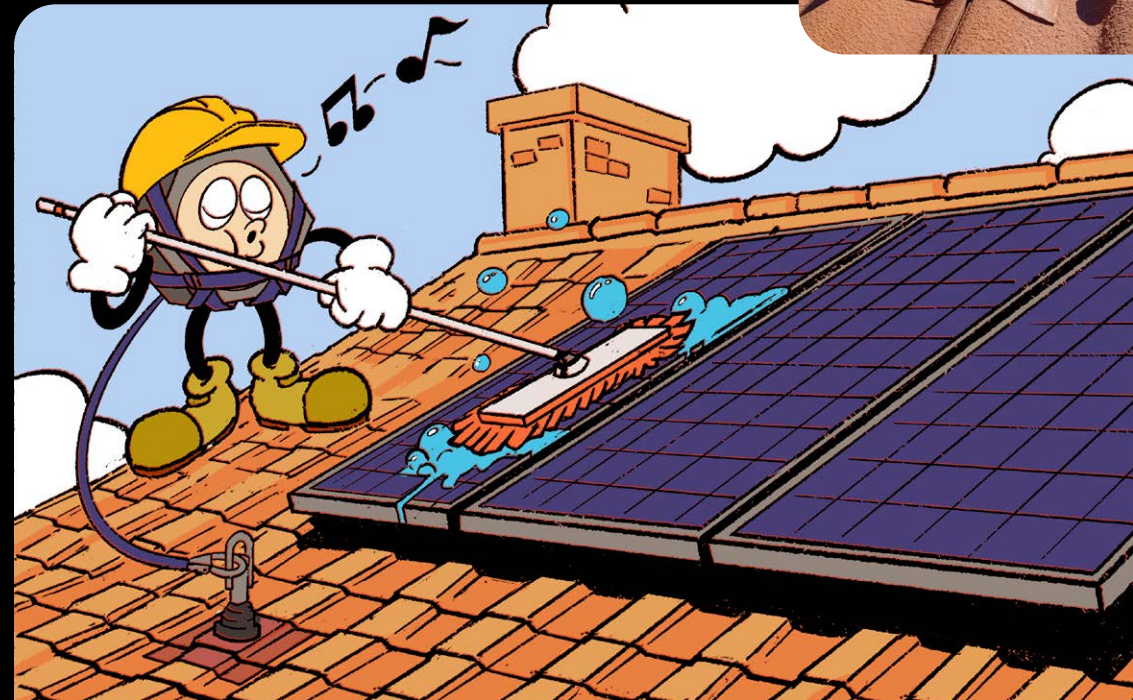

Want to get up on your roof to clean or do maintenance? Our **Roof Safety Anchor** is a single person fall arrest system, capable of supporting **1500kg-force (15kN)** and is designed to help protect workers from free falling. It arrests them mid-air and prevents impact at a lower level.

Hard-working contractors and builders shouldn't be putting their safety at risk when accessing the roof to carry out their work. *What is your life worth?* Manufactured, tested and compliant to **AS/NZS 5532:2013**

STAY SAFE WHILE WORKING ON YOUR ROOF.

FIXING KITS NOW AVAILABLE!

To ensure you have exactly what you need for your installation, we have put together several kits of all the essentials.

All our Brackets and Anchors have matching kits available on our website.

Available in both **Mild Steel** and 316 Marine Grade **Stainless Steel** to match your Brackets/ Anchors.

OUR WEATHER SEAL OPTIONS

All our brackets and anchors come with **5 different Weather Seal Options**. These help to protect your roof from any leaks after installation.

TIN ROOF OPTIONS:

- **BLACK FLASHRITE (BAL 12.5)**
- **RED FLASHRITE (BAL 29)**

The FlashRite Weather Seal is the best option for tin roofs. The Black FlashRite is made of EPDM and can withstand constant temperatures of -40°C to 115°C.

The Red FlashRite is **recommended** for **high-risk bush fire areas**, as its red silicone can withstand constant temperatures of -50°C to 200°C.

TILE ROOF OPTIONS:

- **BLACK FLEXATILE**
- **TERACOTTA FLEXATILE**
- **GREY AQUA TILE**

The **Flexatile** has **two butyl adhesive strips** on its under-side that help it form and stick to the roof tile. The **Aqua Tile**, however, has a **fully adhesive butyl back** for complete water tightness. Both options can be painted with 100% Premium Acrylic Roof Membrane Paint to get the perfect colour to match your roof.

RETRO-FIT CLIPS

If you accidentally damage your FlashRite in the installation process and your bracket has already been installed, you can easily Retro-Fit a new FlashRite Weather Seal.

If you need to replace your FlashRite Weather Seal at any stage, these clips can help you **replace them without fully re-installing**.

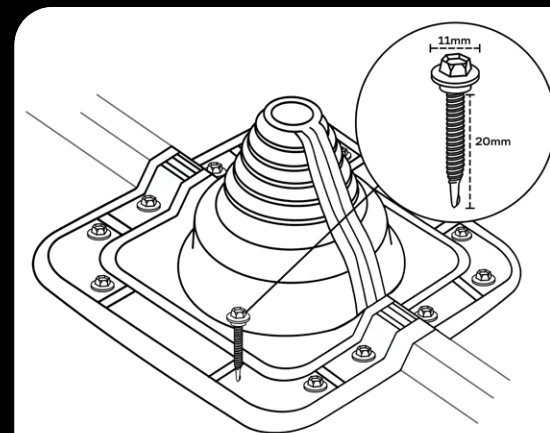

They clamp down the seam in the middle of the FlashRite after cutting it for re-installation.

SELF-DRILLING SCREW KIT

When installing a FlashRite Weather Seal, you need to fix the base with **12x Class 4 Hex Head Self-Drilling Screws** with a rubber washer.

This ensures your weather seal stays firmly in place and keeping it as water tight as possible.

Many people skip this step but it **leaves your FlashRite vulnerable** and prone to not sealing your roof as intended.
